SURGICAL RESULTS WITH DRAMATICALLY LESS DOWNTIME

The most advanced facial contouring and refinement procedure to reveal a younger looking you.

"My skin has not felt this firm since I was a single woman in my twenties. There was little to no discomfort and I was back to my normal activities the next day."

- J. S. | PATIENT

One Procedure. Significant, Long-Lasting Results.

WHAT IS FACETITE?

FaceTite is the next best thing to a traditional facelift, without the associated large scars and downtime of excisional surgery. It is a minimally invasive procedure designed to remodel skin and treat fat.

In just one treatment, FaceTite can provide significant improvements to the face and other smaller body areas. It is a safe and highly effective treatment delivering exceptional skin contouring and contraction.

WHAT KIND OF POST PROCEDURE CARE IS REQUIRED?

FaceTite is a minimally invasive procedure performed under local anesthesia or light sedation. Post procedure, patients can go home the day of the procedure, and can resume regular activities shortly after.

WHAT AREAS CAN BE TREATED?

All facial and neck areas can be treated with FaceTite. This includes double chins, jowls, periorbital zones, nasolabial folds, and other smaller body areas requiring contouring.

HOW IS THIS BETTER THAN A FACELIFT?

By avoiding a facelift procedure with large incisions, patients will benefit from reduced post-procedural swelling and discomfort. FaceTite is a less traumatic procedure delivering a natural looking final result.

HOW QUICKLY WILL I SEE RESULTS?

Results can be seen immediately. Best results are noticeable after 6 weeks and continue over the next 12 months.

Please speak to your aesthetic provider to see if FaceTite is right for you.
