Y Lift Benefits

- Instant results with minimal downtime
- No general anesthesia or incisions
- Results last between 1-3 years, depending on individual

F.A.Q.

How long does the Y Lift take to perform?

Typically, we schedule you for a consultation with Dr. Bowen in order to identify if this is the correct procedure to fit your rejuvenation needs. Once determined you are a Y Lift candidate, we schedule you for an appointment. That appointment takes approximately 1 hour.

How long is recovery?

There is little to no recovery time with the Y Lift. You may feel slight tenderness, soreness and possible minor bruising for a couple of days post procedure.

What is the Y Lift?

The Y Lift is based on the notion that youthful facial contours are shaped like the letter “Y.”

For example, if you were to superimpose a “Y” over the face you would see that it appears wide at the top spanning the eye and cheekbone region and then narrows down to a point culminating at the chin.

What can the Y Lift do for you?

- Accentuates the cheekbone region & under eye hollowness
- Defines jawline, rids the face of unpleasant jowls
- Significantly improves upper neck area
- Refines lines around the mouth (smile lines)

More About the Y Lift

- Customized to each patient
- FDA approved fillers utilized- RHA, Voluma XC, and Juvederm
- Suitable for both men and women between the ages of 25-80

Do the results vary from patient to patient?

Yes. The Y Lift procedure uniquely benefits each patient. Dr. Bowen closely studies the facial structure of each patient, customizing the procedure so that it naturally accents the patient’s specific features.

How is the Y Lift different from a traditional facelift?

Y Lift address the loss of underlying bone structure that occurs as we age. The Y Lift is a non-invasive procedure that requires NO incisions, NO anesthesia, NO downtime. It may be recommended to have the Y Lift procedure done in conjunction with a facial surgery if that is the optimal treatment plan for your desired rejuvenation needs.

How does the Y Lift differ from other filler procedures?

The key to Y Lift is not fillers, but the specialized instrumentation, placement, and technique used. The instrument is inserted beneath the skin to instantly lift the muscles, fascia and fat just below the skin. This adjustment provides the greatest lift in the face. A hyaluronic acid filler, a substance that is found naturally in the body, is then used to hold everything in its newly elevated position. Leaving your facial contours instantly restored, rejuvenated and enhanced.
